SUMMARY

Software Engineer with ~3 years building backend systems and REST APIs in Python and FastAPI, mostly on AWS serverless (Lambda, SQS, API Gateway). Production experience across BFSI fraud detection, brand-protection automation, and LLM integration. Comfortable owning services end to end — from API design to data pipelines and reporting.

TECHNICAL SKILLS

Backend: Python, FastAPI, REST API, MongoDB, MySQL, PostgreSQL, Node.js, SQLAlchemy, Pandas
Cloud & DevOps: AWS (Lambda, S3, SQS, API Gateway), Docker, Linux, Git, CI/CD
AI & LLM: OpenRouter API, LLM Orchestration, Prompt Engineering
API Dev: RESTful APIs, Rate Limiting, Async/Await, httpx, JWT Authentication
Frontend: React, JavaScript, TypeScript, Next.js, HTML, CSS, Tailwind CSS

PROFESSIONAL EXPERIENCE

Software Engineer – mFilterIt | August 2023 – Present | Bangalore, India

- Re-architected a BFSI fraud-detection service that builds a person's digital presence from inputs like phone number, email, and social media profiles to flag likely fraud. Moved it from a sequential ECS container to an SQS-triggered AWS Lambda that calls 7–10 internal APIs per entity concurrently, cutting processing time from ~5 minutes to ~2 minutes (about 60% faster).
- Added per-call failure alerts so the team is notified the moment any upstream API fails, and built the aggregation and data-cleaning layer that combines all API responses into a single fraud-risk result.
- Built PDF and Excel reporting APIs, including bulk Excel exports, using Playwright and PyPDF2. Reduced verification processing time by **60%** by implementing async SQS workflows with MongoDB aggregation pipelines and automated PDF/Excel report generation.
- Built a serverless pipeline that ingests bulk brand-protection takedown requests from CSV/Excel files in S3, validates them, and raises takedown tickets through internal REST APIs in chunks of 1,000, syncing status across PostgreSQL and MySQL with a full audit trail.
- Cut database load on that pipeline by batching record updates into a single query instead of one-per-row, and added retry-with-backoff handling for MySQL deadlocks under heavy load.
- Worked on a company-wide ticketing platform (used for customer support and internal takedowns) with RBAC and JWT authentication; diagnosed and fixed recurring "413 Payload Too Large" errors when banking clients uploaded compliance files above API Gateway's 10MB limit by replacing server-side uploads with short-lived S3 pre-signed URLs, letting clients upload directly to S3 and removing both the size cap and the file-buffering load on Lambda.

PROJECTS

AI-Powered Resume Analyzer | FastAPI, OpenRouter (GPT-4o, Claude 3.5 Sonnet, Llama 3, Gemma, Mistral), React, TypeScript [\[LINK\]](#)

- Full-stack resume analysis tool integrating multiple LLMs via OpenRouter API; uses a hybrid ML + LLM pipeline to match resumes against job descriptions with 85% accuracy

Task Management App | React, TypeScript, TailwindCSS, Firebase [\[LINK\]](#)

- Built a highly responsive task management system featuring Google OAuth, real-time sync, and complex drag-and-drop interactions across multiple view modes

ACHIEVEMENTS & CERTIFICATIONS

VibeIT 2025 Hackathon – 1st Place

Team Lead | Built and presented an end-to-end cloud automation platform with cross-account telemetry and real-time observability

Bright Beginning Award – mFilterIt | 2024

Recognised as an outstanding new joiner for early contributions to production systems

FastAPI – Udemy | 2024, Google Cybersecurity Certificate – Coursera | 2026

EDUCATION

Bachelor of Technology – Computer Science 2019 – 2023

Karunya Institute of Technology and Sciences, Coimbatore
